

PROJECT REPORT

TITLE:

ONLINE TOURIST GUIDE

SUBMITTED BY:

16MIS0452-M.PAVITHRA

FOR THE COURSE SWE1007

PROGRAMMING IN JAVA

**SCHOOL OF INFORMATION TECHNOLOGY AND
ENGINEERING, VIT, VELLORE.**

VIT[®]
UNIVERSITY
(Estd. u/s 3 of UGC Act 1956)

1. ABSTRACT:

“The world is a book and those who don’t travel only read one page”

- Tourism in India has seen exponential growth in recent years. The reason for this growth in India is the tremendous progress made by the Indian economy.
- The tourism is a competitive industry that needs the adaptation to changing customer requirement and satisfying customer needs is all into the business.
- This project guide its end user to find the desired location and find the best place around it and important places like hospitals, educational institution, holy places,hotels,restaruntets,railway station,bus stand,market,parks etc...
- It also provides the history about the destination places.
- The preponderance of this project is that this website is GIS based so that the user can view the location in google map.
- The end user can login into the website or if they are new to this website then they can fill the sign up form.
- Then it navigate to the select city page and after selecting the city it gives the history it can be viewed in google map and helps finding the places the user desired.Advance booking of tourism form will also be available.
- NetBeans IDE 8.2 is used where designing of the frontend and backend and storing data in databases are done.

2. INTRODUCTION

Over the years, tourism has continued to gain massive interest at a global scale. It is a major foreign exchange earner for a good number of advanced and emerging economies. It is also true that information explosion makes it cumber sometimes to access relevant information to enhance decision making. This has given rise to the emergence of intelligent systems or mechanisms that facilitate quick access to relevant content found in the Internet.

For developing countries like Nigeria, tourism is one of the untapped but potentially big income generator. There are many tourist destinations that spread across the chennai.

Whereas some exist naturally, others are manmade. In this era that has witnessed rapid advances in information technology, information overload has become a serious problem to those seeking for information online. Recently, intelligent search mechanisms have been deployed on the web that shows that the problem of information overload can be partially eliminated by providing a platform with more intelligence to assist tourists in

the search for relevant information.

In the aspect of tourism, Internet and web technologies have made more readily available information on tourist locations, accommodations, transportation, shopping, food, festivals, and other attractions, thus improving tourism experience. The goal of this project is to design and implement intelligent platform that will aid tourists in chennai to have access to information on tourist locations thus help fasten their decision making process.

Problem statement:

People with disabilities have a right to, and want to enjoy travel and leisure experiences.

However, their travel experiences are still characterised by transportation constraints, inaccessible accommodation and tourism sites, and inadequate customer service

Tourists with disabilities, to a greater extent than hitherto possible, wish to integrate in the tourism mainstream, notwithstanding the numerous architectural and transportation barriers to their mobility they still have to put up with. This is further aggravated by the fact that information about the choice of appropriate tourism opportunities is not readily accessed by the prospective tourist. Hence there is a need to step up communicative marketing efforts in the field of tourism for travellers with disabilities, to enable broader dissemination of available tourism opportunities adapted to specific and individual needs

People with disabilities have a significantly different tourism experience. For many travellers with disabilities, a situation like the following is a familiar one: public transportation is difficult and often not accommodating, and/or hotel rooms do not always meet accessibility codes

System design:

This tourist information system based on geographic information system technology is the new space information system. Tourism information GIS system based on the tourism resources in province ,considering the resource protection , development and utilization ,and tourism supporting project for background ,in geographic information system technology support ,complete the relevant data collection and digitization work.

Database Connection:

When the users browse search and analysis in the spatial data, they usually hope response speed .But because the map of large amount of data ,transmission speed is low , in the client users 'digital map when operating procedures response speed is slow, if there are many users access server simultaneous then access speed naturally more slow .Due to the problems caused by the transmission speed is difficult to overcome ,but to improve access speed have

worked to do .improve data access speed can be set to establish an efficient database connection.

3. SYSTEM REQUIREMENTS:

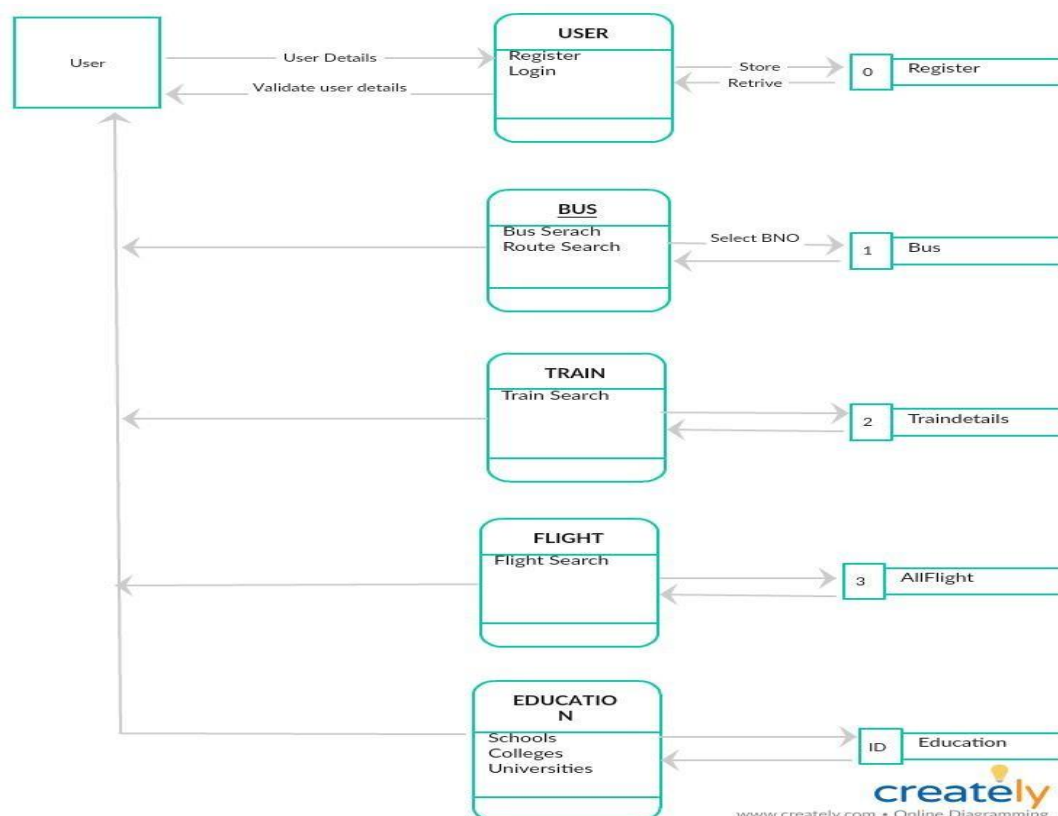

1. Hardware Specifications:

- Hardware : Pentium-based systems with a minimum of P4
- RAM : 256MB (minimum)
- Keyboard, Mouse

2. Software Specifications:

- Operating System : Windows
- Technology : Core java, Adv Java (JDBC, Servlets, JSP)
- DE : NetBeans 7.4
- Web Server : WAMP server
- Database : MySql
- Software : JDK1.7,WAMP server 64, MySql 5.5

4. ARCHITECTURE-DATAFLOW DIAGRAM:

Context level DFD:

Level 1 DFD for Administrator:

Level 1 DFD for Users

Level 2 DFD for Travels

Level 2 DFD for Booking Modules:

Level 3 DFD for Testimonial:

Level 2 DFD for Routes

Level 2 DFD for Pickup Points:

4.1. MODULES

LOGIN:

Existing users can login with their username and password. This username and password is stored in database when user enter their details the system check with database if match found then user can login otherwise it notify has incorrect username or password.

REGISTRATION:

The new user can register using their details which will be stored in database from which will be further used to login.

CATEGORIES:

This module contains categories of tourist guide which are:

- Entertainment
- Safari
- Holy place
- Trekking
- Restaurants
- Hotels

In the above said categories the user can trace the best places in them using connection of google map and they can book bus, train and flight using connection of MakeMyTrip and they can also book the best guides to guide them in tourist spot.

LOGOUT:

Used for user to logout of the system.

BOOKING:

In this module the user can book travel ticket, book guide and can also book tour event by advance.

SEARCH:

In this module the user can search the places they want to visit and can know more details about that places.

FEEDBACK:

The user can give feedback about this system using this module.

5. EXPERIMENTAL ANALYSIS

LOGIN:

A screenshot of a login form window. The window has a green title bar and a light gray background. In the center is a pink rectangular area containing the login fields. At the top of the pink area is a blue 'LOGIN' button. Below it are two input fields: 'NAME' and 'PASSWORD', both with blue labels. To the right of the 'PASSWORD' field is another blue 'LOGIN' button. At the bottom of the pink area is a button labeled 'NEW MEMBER SIGN UP' in pink text.

6. RESULT AND DISCUSSION:

For people who want the trip planned entirely, who don't want to use the filtering method of pen and paper or trace filtering tour guide helps them completely. The tour guide is a website that helps vacation goers plan out where to go and what to see based on their interests.

The website like Trip advisor shows only the places to visit in a city but not with an appropriate plan. Some other existing websites like Inspirock, Make My Trip shows the plan on its own basis but not with customer's priority. The tour guide shows the best plan that matches with your interest of places to visit in a city.

7. CONCLUSION:

This project entitled online tourist guide, developed in Java, is an attempt to computerize the different operations in travel agencies. The project is very flexible and secured; admins can incorporate new features and manage the modules of the system as per requirements. Being a web-based software, it can be accessed from anywhere with internet.
